Efficiency

## ELECTRIC MOTORS

Low Voltage Motor  
Technical Brochure

# PRODUCT OVERVIEW - THREE PHASE MOTORS

## Type AHE - Aluminium IE2 / MEPS2 Motors

- **Ratings from 90 Watt up to 18.5 KW**
- **Metric frames from IEC 56 ~ 160**

- Foot, Flange and Face mountings
- Removable feet
- TEFC, IP55 enclosures
- Class F insulated windings - Class B rise
- Quality Sealed for Life Bearings
- Multi-Voltage & Multi-frequency ratings
- Top mounted terminal box as standard  
terminal box can be mounted on Right hand side or left hand side on motor frames 80 to 160

## Type HE - Cast Iron IE2 / /MEPS2 Motors

- **Ratings from 550 Watt up to 630KW**
- **Metric frames from IEC 80 ~ 400**

- Foot, Flange and Face mountings
- TEFC, IP56 enclosures
- Class F insulated windings – class B rise
- Quality Bearings. (SKF, NSK, NTN)
- Multi-Voltage & Multi-frequency ratings
- Top mounted terminal box standard on all motors
- TC Thermistors standard on 11kw & above
- Re-greasable bearings on frames 200 and larger
- Our own workshop carries out all modifications to the above standard specification to create application specific motors.  
E.G. IP upgrades, insulated, roller angular contact bearing upgrades, forced cooling systems, special paint specifications, non standard mounting requirements and many more special application services.

## Type ML & MY - Aluminium Single Phase Motors

- **Ratings from 120 Watt up to 2,2KW**
- **Metric frames from IEC 56 to 100**

- Foot, Flange and Face mountings
- TEFC, IP55 enclosures
- Class F insulated windings – class B rise
- Quality Sealed for Life Bearing
- Top mounted terminal box as standard
- Terminal box can be mounted on R/H or L/H side
- Manual Overload reset protection
- Fully enclosed capacitors

Our dedication to constant product improvement means that design features and performance characteristics outlined in this catalogue are subject to change without notice.

# SPECIFICATION

## Standards

EMT OMEC Motors are designed, manufactured and tested to the following Standards

IEC 60034-1	Ratings & Performance
IEC 61972 / 60034-2	Losses & Efficiency
IEC 60034-5	Degrees of Protection
IEC 60034-6	Methods of Cooling
IEC 60037-7	construction mounting
IEC 60034-8	Terminal & Markings
IEC 60034-9	Noise Limits
IEC 60034-14	Vibration Mechanical
IEC 60072-1	Dimensions & Outputs
AS/NZS 1359.5.2004	MEPS2 Energy Efficiency Standards

## Type Designation

EMT OMEC Motors are designated by standard codes:

Example AHE 132S12 B3

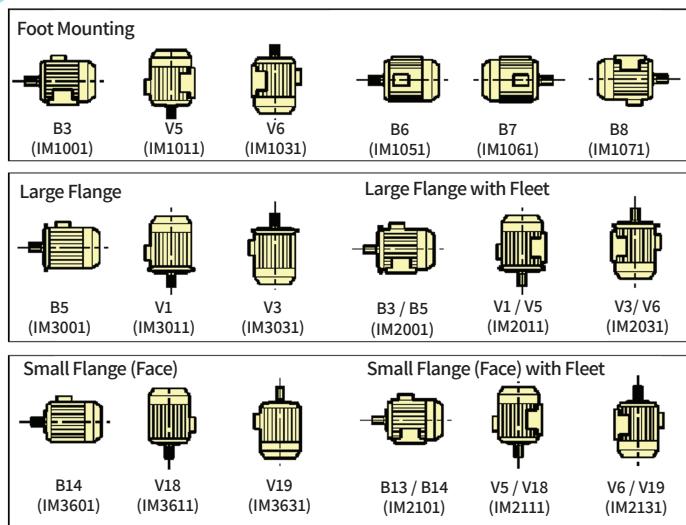

A	Aluminium Frame If absent frame is Cast Iron
HE	Energy Efficient (MEPS2 / IE2)
132S	IEC Frame size (shaft height mm)
1	Stator core length. 1 = Short, 2 = Long, 3 = Extra long
2	Number of poles 2 = 3000rpm 4 = 1500rpm 6 = 1000rpm 8 = 750rpm
B3	Mounting arrangement B3 Foot B5 Flange B35 Foot & Flange B14A / B14B Face mount flange

## Nameplates

All EMT OMEC motors are fitted with Stainless Steel nameplates. Rating and performance data is embossed and stamped to ensure it can remain permanently identifiable

## Mounting Arrangement

The design of all EMT OMEC motors is such that they can be operated in all horizontal-mounting positions, providing consideration is given to the location of drain holes and bearing life EMT OMEC Motors are available in B3 foot mounted, B5 flange mounted, B14A face and some B14B mounting configurations. For confirmation of vertical operation requirements please refer to our offices for assistance with bearing design requirements.

## Duty

All EMT OMEC motors are Continuous Duty Rated (S1), based upon max ambient of 40°C and altitudes below 1000 metres. For applications where motors are required to meet duty ratings from S2 to S9 please contact our offices for assistance

## Cooling

Motors in standard form are Totally Enclosed Fan Cooled (TEFC IC411). Cooling fans are one-piece fibre-reinforced, multi-blade polypropylene or high pressure die cast alloy. All fans are bi-directional and fan covers are rigid pressed steel. Other cooling formats available are

- IE416 Forced Ventilation for VSD use  
IE418 Pad mount for external ventilation

## Forced Ventilation IE416

All three phase EMT OMEC Motors are suitable for Inverter Duty applications. For constant torque applications where a motor operates continuously below 50% of its rated speed, a Constant Velocity Cooling Unit is recommended, to providing continuous cooling air over the motor regardless of the output shaft speed.

EMT OMEC also recommends the fitting of insulated bearings on motors above 90kW to eliminate circulating currents and prolong bearing life.

It should be noted that with VSD applications where speed frequently exceeds 60Hz a torque drop off may be experienced necessitating the use of a higher kW motor, contact our offices for recommendations in this regard.

## Rotors

All rotor windings and end rings are one-piece die cast aluminium with cooling fins to provide internal air movement. Shafts are made from high quality carbon steel. See data tables for dimensions.

## Balancing

Rotors are dynamically balanced to severity grade normal (N) as specified in relevant IEC and Australian standards. EMT OMEC motors can be supplied with either a reduced (R) or special (S) vibration level upon request.

Vibration Grade	Rated Speed (rpm)	Maximum rms value of vibration velocity per Frames ( mm/s )		
		56 to 132	160 to 225	250 to 450
Normal	600 - 3600	1.8	2.8	3.5
Reduced	600 - 1800	0.71	1.12	1.8
	1800-3600	1.12	1.8	2.8
Special	600 - 1800	0.45	0.71	1.12
	1800-3600	0.71	1.12	1.8

## Direction of Rotation

All motors are standard bi-directional rotation.

## Fasteners

All fasteners are metric zinc plated.

## Bearings

Motors from frame sizes 56 up to 180 are fitted with “sealed for life” type bearings.

Motors frame size 200 to 400 frame have re-greasable bearings with a grease relief facility. Motors are supplied with high quality deep groove ball bearings, lubricated with lithium-based grease suitable for operation within an ambient range of -20 deg C to +55 deg C.

Special bearing arrangements can be provided to suit various applications. See data tables for standard bearing sizes.

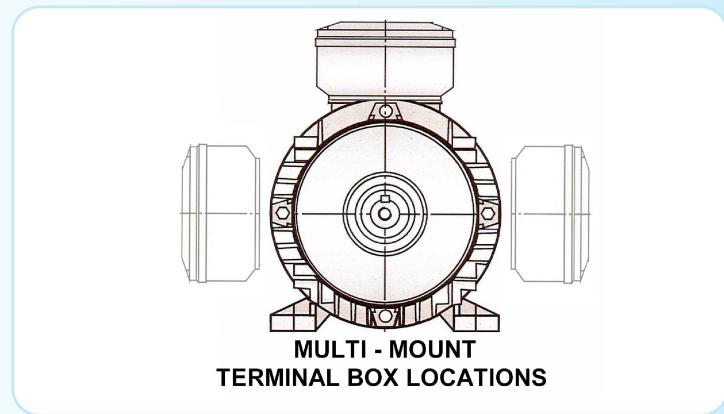

## Paint System

An enamel based epoxy polymer paint finish is used as standard. Special paint systems such as 2-pack epoxy for food industry or for corrosive environments can be provided upon request

## Terminal Boxes

All terminal boxes can be rotated in 90 degree steps through 360 degrees. Metric conduit entries are provided on all motors. Refer to dimension data for number and size of entries. The terminal box material on frames type AHE 63 to AHE 160 is Alloy and frames HE 132 to HE 450 have Cast Iron boxes. All Single phase motors have reinforced PVC boxes which enclose the capacitors

Aluminium motors are multi-mount and can have left, top or right cable box positions. Cast Iron motors have top boxes only.

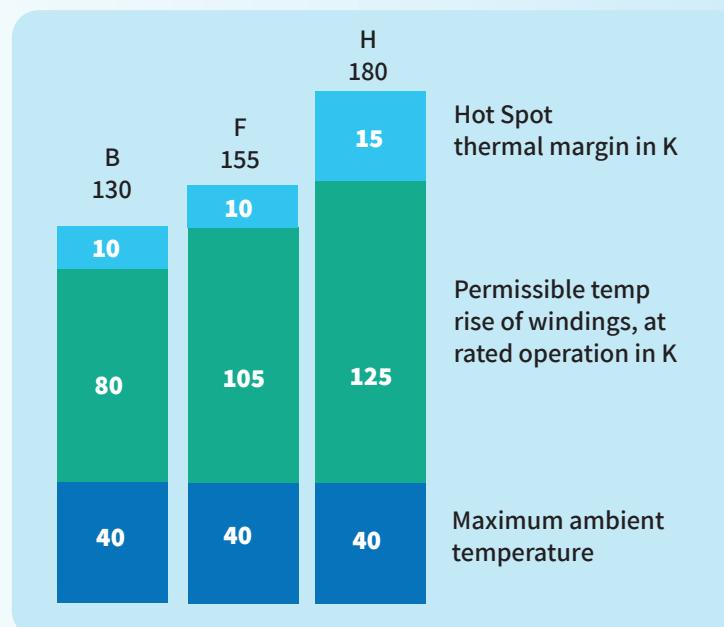

## Insulation

EMT OMEC Motors are all wound with Class F Insulation. Class H motors are available on request. All designs limit rise to 80 Deg C at FL

Insulation materials are divided 3 general classes each having a recommended temperature range under normal operating conditions. Exceeding these limits will reduce motor life proportionally.

## Temperature Limits for various winding insulating classes.

## Anti-Condensation Heaters

All EMT OMEC motors can be fitted with anti condensation heaters, installed around the drive end windings these usually energised when the supply to the motor is switched off. Heater power ratings normally used are shown in the table below. The standard supply voltage is 220 - 240V AC but other supply voltages can be provided upon request.

Motor Frame Size	Power ( Watts )
56 - 71	8
80 - 112	25
132 - 200	40
225 - 280	54
315 - 400	99

## Thermistor Protection

EMT motors rated at 11KW and above are fitted with one set of 3 x PTC Thermistors embedded into the windings during manufacture. Thermistors can also be fitted to motors in frame sizes 63 to 132 as an option.

## Optional Over-Temperature Protection

Additional protection devices on request:

### Alarm Thermistors:

A second set of PTC Thermistors with a lower temperature rating, can be installed to provide an over temperature alarm warning prior to any trip activation of the main thermistors

### PT100 Thermocouples:

These platinum resistance thermometers provide variable linear resistance in proportion to winding temperature. They are particularly suitable for continuous temperature monitoring application requirements in windings and bearings.

## Terminal Connections (Three phase)

All 3 phase motors have six terminals. EMT OMEC motors are compatible for use with single-phase variable frequency controllers up to 3kW and 3 phase variable frequency controllers throughout the entire range.

### DOL terminations 3KW and below are:

**Delta** 220/240V 50Hz or 260/280V 60Hz

**Star** 380/415V 50Hz or 440/480V 60Hz

### DOL terminations 4KW and above are:

**Delta** 380/415V 50Hz or 440/480V 60Hz

**Star** 660/720V 50Hz or 760/830V 60Hz

## Terminal Connections (Single phase)

See connection diagram for single phase motors in this section.

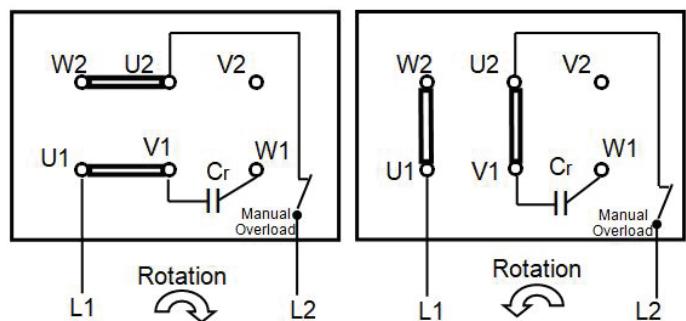

Both MY and ML Series Single-Phase motors are suitable for applications where reversing of direction is required, either by simple changing of connection bridges or by use of an external reversing switch.

Motors from frame size 56 to 90 are suitable for 240V 50Hz connection. Motors of frame size 100 and above are Dual Voltage rated and suitable for connection to 240V or 480V, 50Hz single phase supply.

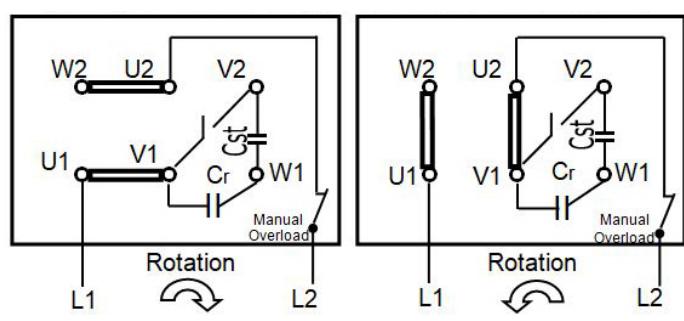

## Single Phase Centrifugal Start Switch

Cap Start/Cap Run motors utilise a solid, internal centrifugal switch plate mechanism that has a larger diameter than the motor bearings, therefore eliminating potential damage to the switch plate when the motor is dismantled for maintenance. The switch plates on larger ML series motors have dual start switch contacts, making them suitable for applications that have a long run up time.

MY Series - Capacitor Run Motor

ML Series - Single Voltage, Cap start / Cap run Motor

# Type AHE Aluminium High Efficiency Motors

MEPS2006 Compliance with AS/NZS1359.5.2004

IE2 Efficiency values according to IEC 60034-30

- Ratings from 90Watt to 18.5kW
- Multi-Voltage / Multi-Frequency ratings
- Top mounted terminal box on all frames
- Terminal box can be relocated to Left hand side or Right hand side on frames AHE 80 ~ AHE 160

- Metric frames to IEC and Australian Standards
- Low weight Aluminium construction.
- TEFC, IP55 enclosure
- Class "F" insulation
- Foot, Flange and Face mountings

# Type HE Cast Iron High Efficiency Motors

MEPS2006 Compliance with AS/NZS1359.5.2004

IE2 Efficiency values according to IEC 60034-30

- Ratings from 550Watt to 630kW
- Metric frames to IEC and Australian Standards
- Multi-Voltage / Multi-Frequency ratings
- Top mounted terminal box on all frames
- Thermistors standard on 11kw & above
- Cast Iron construction.
- TEFC, IP56 enclosure
- Class "F" insulation
- Foot, Flange and Face mountings
- Regreasable bearings on frames 200 and larger

# Other EMT products and services

## High Voltage Motors

- o High voltage motors at 3,3kV, 6,6kV and 11kV.
- o kW ratings from 400kW to 10,000kW
- o Cast Iron motors to 500mm frame approximately 1000kW
- o Fabricated frame motors to 1000mm and 10,000kW
- o Motors designed to suit application
- o All mounting arrangements B3 B5 B35 and Vertical
- o Slipring motors available in all mount variations
- o We manufacture bespoke new for old replacements

## Variable Speed Drives

- o Full range to suit all EMT OMEC motors
- o Single phase VSDs 240V to three phase 240V
- o Three phase drives all voltages
- o Various IP ratings available as well as full cabinets

## Motor repair services

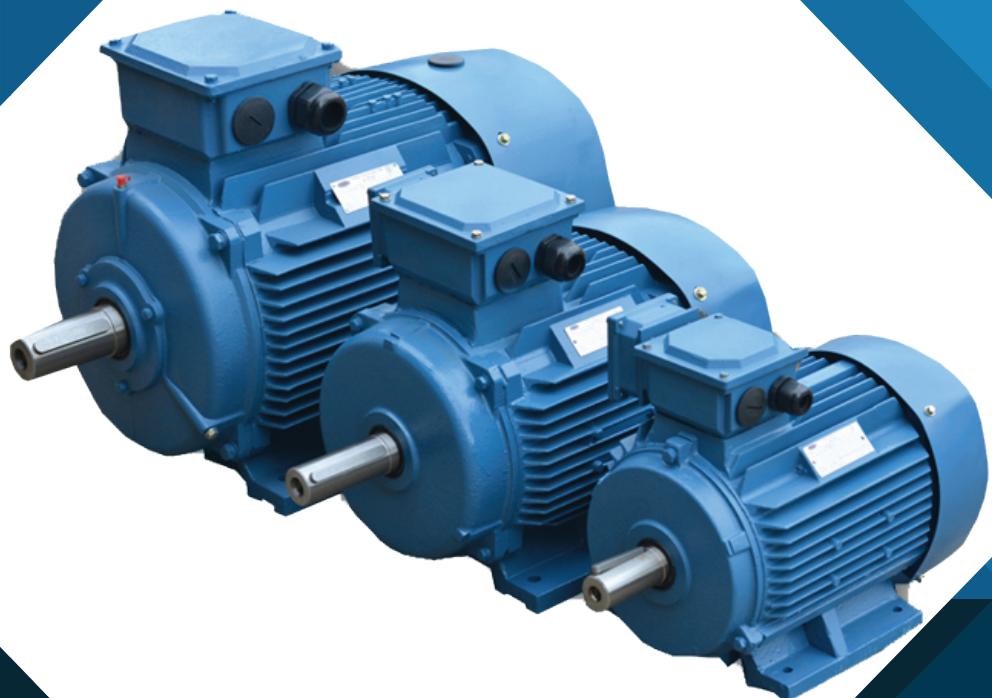

- o Full Motor rewind and repair facility within our own works
- o Motor service contracts undertaken
- o Installation and alignment services
- o Fabrication of special mounting bases adaptors

## Engineering Services

- o General Mechanical and Electrical engineering services
- o Machining of special components

## EMT Projects

- o EMT's project division undertakes complete plant upgrade projects.
- o The team has many years of experience in the maintenance and upgrade of Plant and Equipment and can also undertake longer term project based work.
